EXPERIENCE

Data Science Intern

July 2024 – January 2025

Mente consultancies

Delhi

- Designed Python-based systems for **rolling feature updates**, signature storage, and **real-time predictions** without database dependency.
- Built Calendar and Rebase Marts in SAS to restructure time-series data, address seasonality, and ensure data quality.
- Developed **statistical variables** and **pipelines** in SAS Viya for machine learning models, enabling robust predictions.
- Created **SAS Visual Analytics dashboards** to monitor model performance and data drifts.

SWE Intern

May 2023 – August 2023

Cognus Technology

Udaipur, Rajasthan

- Contributed to live project **Gradding** using **Flutter**, **Dart**, and Figma.
- Designed intuitive on-boarding with **questionnaires** and document uploads, **handling return** cases seamlessly.
- Conducted in-depth market research on competing applications, analyzing **features** and identifying **gaps** to streamline on-boarding app development by **25%**.

EDUCATION

Sir Padampat Singhania University

Bachelor of Technology in Computer Science(AI-ML) GPA: 7.538

Udaipur, Rajasthan

October 2020 – May 2024

PROJECTS

DevOps Capstone Project - QR Code Generator

Python, Docker, GitHub, Azure, CI/CD

- Developed a DevOps-based QR Code generation system using **Azure Blob Storage** for secure storage and **Docker** for containerization.
- Built three components: **Front-end** (NextJS), **API** (FastAPI/Python), and **Storage** (Azure), each deployed in separate containers.
- Implemented **CI/CD pipelines** with **GitHub Actions** for automated testing and deployment to **Docker Hub**.
- Visualized the project workflow using a flowchart, available here: [Erasor.io Flowchart](#).

MLOps Project - Bloom's Taxonomy Level Detection

Python, Streamlit, AWS, MLflow, Dagshub

- Developed a Bloom's Taxonomy level detection system, deploying the front-end on **AWS** using **Streamlit** and managing machine learning workflows with **MLflow** for experiment tracking and model versioning.
- Implemented a **6-step pipeline** covering data ingestion, transformation, training, evaluation, and prediction, with each stage configured using **YAML** files for flexibility and scalability.
- Created project entity components for each pipeline stage, including data handling, model configuration, and deployment, ensuring smooth and traceable execution across the project.
- Used **Dagshub** for collaborative version control and dataset management, while automating deployment with **GitHub Actions** for continuous integration and delivery to **AWS**.

OBE Module for University - Major Project

MySQL, HTML, PHP, DataDog

- Built an Outcome-Based Education (OBE) module to implement the OBE curriculum efficiently, using **MySQL** for the database and **PHP** for the backend.
- Integrated **DataDog** for monitoring system health and performance by tracking key metrics such as user logins, transactions, and application errors.
- Set up custom **DataDog dashboards** and alerts to monitor KPIs and receive real-time notifications for anomalies or issues in the application.
- Ensured system reliability by implementing **DataDog** alerts for failed logins, high traffic, and server health, enabling proactive issue resolution.

SKILLS

Languages : Bash/Shell, Python, C++, HTML/CSS, Java
Tools/Platform: Vim, Git, Linux, Docker, Kubernetes, Sed/awk, Jenkins, DataDog, Azure, GitHub Actions
Frameworks : Flutter, Flask, Django, Regex, Requests
Databases : MySQL, SQL, Firestore
Attributes : Articulate, Adaptable, Optimistic, Meticulous

ACHIEVEMENTS

Docker Essentials - By IBM. [Certificate](#)
Silver Medalist - Coding Hackathon, 2023. [Certificate](#)
Silver Medalist - All India IEEE Ideathon, 2021. [News](#)
Gold Medalist - All India IEEE SPSU Ideathon, 2020. [News](#)
Automate the Boring Stuff with Python Programming by Al Sweigart - on Udemy. [Certificate](#)

ACTIVITIES

Google Cloud Skill Boost: Career Readiness - Associate Cloud Engineer Path. [Certificate](#) [Credly](#)
Using Debian Linux as secondary OS for 4+ year, customize(rice) it with DWM.
Hosted portfolio on EC2 and Azure Compute Engine for 2 years, using nginx server, and presently using GitHub Actions. [Portfolio](#)
